

2.2 Ton Finger Clamp - Smooth Face movable jaw

Heavy-Duty Side Clamping

11040

HEAVY-DUTY SIDE CLAMPING

Material

Hardened steel, with spring steel clamping element.

Technical Notes

A low height, very powerful compact clamp.
These clamps have a unique sideways and

downwards clamping action.

Tips

Provided with specially ground location bolts $\varnothing 10,2 - M10$, allowing for precise positioning. For mounting there are 2 tapped holes at $44,00 \pm 0,005$ mm centres, M10 with depth of 28mm, counterbore

10,2 (H6) with depth of 14mm.

Important Notes

When used in conjunction with fixed stop, part nos. 11041 or 11043, these clamps achieve a positive downforce on both faces of the workpiece - a unique feature.

Order No.	Clamping height h_1		Clamping stroke l_1		d_1	d_2 tol. h6	h_2	h_3	h_4	h_5	l_2

4	2000

Application

HEAVY-DUTY SIDE CLAMPING

Unique Horizontal Clamping Set-Ups

Part No. 10900, 10920, 10940

T-slot table and special machining set-ups

Part No. 11040, 11041, 11042, 11043

Supports and special machining set-ups

Part No. 11070, 11071

Supports and special machining set-ups

Part No. 11080, 11081, 11083

T-slot table, supports and special machining set-ups

Unique Action - "three finger" Clamping

Pull down AND clamp with the highest of clamping forces – from 0,4 tons to 2,2 tons!

Used in our clamping series:

10900, 10940, 10880, 10920, 11040, 11041, 11042, 11043, 11070, 11071, 11080, 11081, 11082, 11083

Our horizontal clamps have a unique "three finger" arrangement ensuring components are both pulled down and clamped in the same motion. The face of the clamp is made of three parts or "fingers":

- Two outer flexible fingers ①; for pulling down the component to the work table.
- One solid central finger ②, to provide direct clamping action.

Available in two styles – smooth and serrated face. They can also cater for workpieces with an adverse angle on the clamping face – for example flame cut steel blanks.

Clamping Action

Contact

The clamps outer flexible fingers ① are approx. 0,25mm longer than the solid central finger/clamping stop ②, this slight difference in length means it is the flexible fingers which first come into contact with the workpiece.

As initial contact is made with the work-piece the flexible fingers ① apply downward pressure forcing the workpiece down against the work table, the flexible fingers are compressed until they are the same length as the solid central finger/clamping stop ②.

Clamping

As the solid central finger/clamping stop ② comes into contact with the work-piece it applies high side clamping pressure to achieve clamping forces up to 2,2 tons (dependent upon clamping model selected).

Machining

During machining the uniquely designed flexible fingers ① continue to flex and twist applying downward pressure to keep the workpiece flat to the work table throughout.

Precision Positioning

The unique clamping action achieves precision positioning of workpieces – ensuring the workpiece remains parallel to the reference surface.

Horizontal Clamping

up to 2.2 tons

Clamping & Height Setting

Unique Action - "three finger" Clamping

Our horizontal clamps have a unique "three finger" arrangement ensuring components are both pulled down and clamped in the same motion. The face of the clamp is made of three parts or "fingers":

- Two outer flexible fingers ①; for pulling down the component to the work table.
- One solid central finger ②, to provide direct clamping action.

Available in two styles – smooth and serrated face. They can also cater for workpieces with an adverse angle on the clamping face – for example flame cut steel blanks.

HEAVY-DUTY SIDE CLAMPING

Options

Quick 1/4 turn eccentric clamping – on models offering 4000 and 12000 Newtons clamping force.

Rear screw clamping – on models offering 6500, 10000 and 22000 Newtons clamping force.
