

Height Setting Screw Jack with pivoting ball

Screw Jacks

SCREW JACKS

15520

Material

Body: steel, tempered, burnished.
Ball: steel, hardened.

Technical Notes

Used as a point support, this heavy-duty

screw jack is designed to support and align cast iron or forged components. Alignment can be made to 0,1mm.

Tips

The pivoting ball minimizes the friction and

reduces the required operating forces. The use of a point-type support reduces the transmission of turning forces generated by the machine spindle.
