

Anti-vibration Mounts with through holes

Anti-Vibration

61480

ANTI-VIBRATION

Material

Rubber on silver zinc plated steel (rubber hardness - 55 Shore A).

Technical Notes

Type 1: M12 thread supplied as separate

item to be screwed in if required.

Type 2: A twin version of type 1 and so therefore take heavier loads.

The central hole in the rubber pad increases the flexibility of the unit - improving

anti-vibration properties.

Used where good deflection properties are needed and for isolating of frequencies higher than 10Hz.

Recommendations for machine mounts

Machine mounts should be installed between two parallel and perfectly flat surfaces. Mounts operating tilted or twisted do not work properly. This may be due to incorrect alignment, tolerances in the building of the structure or over-tightened torque during the installation of the anti-vibration mounts.
