

Keys - Flexi-System for cam latches and locks - zinc

Cam Latch Accessories

A0102

CAM LATCH ACCESSORIES

Material

Die cast zinc.

Technical Notes

Keys for our range of cam latches. For slot

type cam latches no special key required - simply use flat head screwdriver.

Note: For part A1661.AW0006 (Square 6) use key A0102.AW0206 only.

Important Notes

Sold subject to pack quantity.

Keys for A1104 hygienic line

Cam Latch Accessories

A0104

CAM LATCH ACCESSORIES

Material

A0104.AW0010: Plastic

A0104.AW0110: Plastic handle, steel insert

Technical Notes

Keys for Hygienic line Cam Locks A1104.
Order cam and key separately.

Holes provide opportunity for lanyard to guard against theft.

Tips

Made to the high "3A" standard.
This ensures it meets the high standards required for use in food, beverage, phar-

maceutical and medical applications.

Hygienically designed for effective and easy cleaning, corrosion resistant, non-toxic.

Design precludes contamination by dirt, food particles and organic matter.

Order No.	Insert driver	d	l_1	l_2	w

A0203

Material

Steel, zinc plated.

Technical Notes

Use formula to calculate ch (required cam off-set), and select from product table below;

$ch = h - lh$ where;

ch = required cam off-set/height.

h = grip length (distance between inside of latch face and front of cam).

lh = body length of cam latch/lock to be used (see individual latch/lock product table).

Refer to installation drawing below.

Important Notes

Suitable for Flexi-System latches. „With projection“ type ensures correct location and prevents cam rotating over 45°. See **cam selection chart for specific latch/lock suitability**.

Sold subject to pack quantity.

Single Point Cams - Flexi-System

for cam latches and locks - stainless steel - 8 x 8 Sq.

Cam Latch Accessories

A0210

CAM LATCH ACCESSORIES

Material

Stainless steel, AISI 304.

Technical Notes

Use formula to calculate ch (required cam off-set), and select from product table below;

$ch = h - lh$ where;

ch = required cam off-set/height.

h = grip length (distance between inside of latch face and front of cam).

lh = body length of cam latch/lock to be used (see individual latch/lock product table).

Refer to installation drawing below.

Important Notes

Suitable for Flexi-System latches. „With projection“ type ensures correct location and prevents cam rotating over 45°. See **cam selection chart for specific latch/lock suitability.**

Sold subject to pack quantity.

Single Point Cams - Flexi-System - 7 x for cam latches and locks - steel

Cam Latch Accessories

A0215

CAM LATCH ACCESSORIES

Material

Steel, zinc plated.

Technical Notes

Use formula to calculate ch (required cam off-set), and select from product table below;

$ch = h - lh$ where;

ch = required cam off-set/height.

h = grip length (distance between inside of latch face and front of cam).

lh = body length of cam latch/lock to be used (see individual latch/lock product

table).

Refer to installation drawing below.

Important Notes

See cam selection chart for specific latch/lock suitability.

Sold subject to pack quantity.

CAM LATCH ACCESSORIES

Hooked Cam - Flexi-System - 8 x 8 Sq. for cam latches and locks - zinc

Cam Latch Accessories

A0224

CAM LATCH ACCESSORIES

Material

Steel, zinc plated.

Technical Notes

Hooked cam gives rotation of 360°. Suitable for push - pull type cabinet doors.

Allows securing to fixed point or plate within frame.

Tips

Reversing the cam gives both clockwise and anticlockwise hooking action.

Important Notes

Suitable for flexi system latches.

Order No.	Type	Rotation radius	ts
A0224.AW0010	One	28	4
A0224.AW0020	Two	23	4

A0231

Material

Steel, zinc plated.

Technical Notes

Use formula to calculate ch (required cam off-set), and select from product table below;

$ch = h - lh$ where;

ch = required cam off-set/height.

h = grip length (distance between inside of

latch face and front of cam).

lh = body length of cam latch/lock to be used (see individual latch/lock product table).

Refer to installation drawing below.

Important Notes

Suitable for adjustable grip compression cam latches A1603, A1611, A1630, A1810.

See cam selection chart for specific

latch/lock suitability.

Installation hole is rectangular 6mmx4mm.

Please note due to design of the single point cam, it is not possible to use +ve offset cam in reverse/upside down as it results in a clash with the body of the cam latch- making it inoperable.

Single Point Cams - Steel

for adjustable grip compression cam latches

Cam Latch Accessories

A0234

Material

Steel, zinc plated.

Technical Notes

Use formula to calculate ch (required cam off-set), and select from product table below;

$ch = h - lh$ where;

ch = required cam off-set/height.

h = grip length (distance between inside of

latch face and front of cam).

lh = body length of cam latch/lock to be used (see individual latch/lock product table).

Refer to installation drawing above.

Important Notes

Suitable for adjustable grip mini compression cam latches A1660 and A1666. See cam selection chart for specific latch/

lock suitability.

Sold subject to pack quantity.

Installation hole is rectangular 6mmx4mm.

Please note due to design of the single point cam, it is not possible to use +ve offset cam in reverse/upside down as it results in a clash with the body of the cam latch- making it inoperable.

Material

Rod: steel, zinc plated. With Nylon or PA6 rollers.

Rod Guides One to Four: polyamide, PA6.

Rod Adaptor and Roller Adaptor: die cast zinc, zinc plated.

Technical Notes

For use with cam latches & locks, making a

full 3-point latching system.

Distance between base of rod and inside of door depends upon height of rod guide selected, see dimension h_1 .

Rod guides: fixed via counter sunk screw or weld-on stud.

Rod adaptor: fits to any length of rod. If rod of different length is required, simply

cut oversized length with a saw.

Cams: see two point cams A0240 to achieve 3-point locking.

Important Notes

Please order rods, rod guides and rod adaptors separately.

Round rod and accessories compatability

Ordering example for complete rod set

Many industrial cabinets are made of low gauge sheet metal. These often flex under their own weight and can be forced outward due to pressure from the cabinet's internal environment (i.e. air pressure). While a gasket or seal will improve performance, all round consistent sealing is often not achieved because only a single point locking latch is used - to achieve optimum all round sealing a multi-point latching system is required.

What is multi-point latching

For larger cabinets the use of Wixroyd rods and rod guides provide a multi-point latching system locking at two, three or more points on the cabinet - often these points are at the top, bottom and middle of the cabinet.

How does multi-point latching work?

With each multi-point latching system there will be an actuating cam latch, lock or swing handle - attached to these, inside of the cabinet, are a cam and two latching rods.

When the latch is actuated to close, the cam engages with the door frame to provide the first point of locking, while at the same time one of the latching rods moves upwards, while the other down and engages with the top and bottom of the cabinet frame respectively, to provide the second and third points of locking.

Multi-point latching systems can be installed both inside and outside of the cabinet gasket.

Wixroyd multi-point latching systems provide flexible options for locking at several points of a cabinet; increasing security, improving environmental control within a cabinet, and greater stability of tall cabinets.

Different approaches to multi-point latching

1. In conjunction with a standard cam latch, lock or swing handle, use a multi-point cam (A0240) and a latching rod set (A0303, A0321, A0325) to achieve three points of locking.

2. In conjunction with a standard cam latch, lock or swing handle, use a two point locking adaptor A0243 and a latching rod set (A0303, A0321, A0325) to achieve two points of locking.

3. We have a range of swing handles and flush T-handle cam latches with integrated rod control systems. These integrated systems make attachment of latching rod sets far simpler and far more robust. Together they achieve three points of locking.

Finger Pulls for flexi-system cam latches and locks

Cam Latch Accessories

A0352

CAM LATCH ACCESSORIES

Material

Body: polyamide DIN-EN ISO 1043-1 PA 6 GFR 30, black.

Technical Notes

Suitable for all Flexi-System latches with cut-out of 22,2 dia. / 20,2 square. Please

order cam latch/lock separately, see parts A1002 to A1252.

Tips

Note when finger pull used the cam latch useful body length ,lh' is reduced by 2mm. This is important in relation to

selection of suitable cam.

Important Notes

Sold subject to pack quantity.

Selecting the Correct Cam Latch or Lock

A1004 - A4260

Cam Latches and Locks

When selecting a Wixroyd Cam Latch for your application, you need to answer these questions:

1. Which installation cut out?
2. Which body style?
3. Which locking key?
4. Which accessories?
5. Which cam type and size?

Cut out

All our Flexi-System cam latches use a standard installation cut out 22,2 dia, 20,2 square, for maximum flexibility. We also provide a number of alternative cut out dimensions for legacy/historical installations.

Step 1:
Which installation
cut out?

Material and finish

Select from our variety of die cast zinc, polyamide plastic and stainless versions.

Die-cast
zinc chrome
plate

Die-cast
zinc black
coated

Polyamide
black

Stainless
steel

Actuation and locking method

Standard insert driver type, cylinder lock or wing handle type.

Insert driver

Cylinder lock

Wing handle

Number of latching points in application

Typically single point latching is required, but the Wixroyd Flexi-System also provides multi-point latching (typically 3 point - at lock point, top and bottom of cabinet).

Single point

Two point

Multi-point

Step 2:
Which body style?

Standard insert driver keys

Our range of insert driver cam latches require a simple key to actuate. Refer to part A0102 and A0103 for correct keys.

Cylinder locking

Our cam locks with cylinder locks are supplied with two keys per lock. Available as keyed alike or keyed to differ locks.

Step 3:
Which locking key?

- Multi-point latching: use our rod set A0303 to A0325 for suitable rods and rod guides.
- Finger pulls: easily installed with any of our flexi-system cam bodies, finger pull no. A0352 is a simple, cost effective handle for your cabinets.
- Dust Cap: to reduce material ingress.

Step 4:
Which accessories?

Dimensions of our cam latch housings

Dimensions apply to our standard range of flexi-system cam latches.

Available insert drivers for flexi-system latches

Flexi-System

at the core of all your cam latch requirements

Cam Latches and Locks

All our cam latches use a standard cut out dimension of 22,2 Ø and 20,2 square which accommodates many industry standards. Flexi-System parts are fully interchangeable, providing a completely flexible hardware system including two or three point latching systems.

Flexi-system

insert driver cam latches

padlockable cam latches

wing handle cam latches

extended grip cam latches

flexi-system cut out

cam locks

t-handle locks

l-handle locks

compression latches

With or without "Projection"

Different cam bodies require cams either with or without projection.

Step 5:

Which cam type and size?

Wixroyd cams are available in a number of different materials; zinc plated steel, stainless steel (AISI 304) and black plastic.

With projection cams prevent turning of the cam over 45° , but is not suited to all cam bodies. For correct projection type please see individual cam body technical pages.

Number of Latching Points

Single point cams are suitable where just single point latching is required. Multi-point cams are for applications requiring 2 or 3 latching points.

Calculation of correct cam off-set

This is the most important aspect of the selection process.

Cam off-set (dimension ch)

To ensure your cam fully and correctly engages with the frame of your door the correct cam off-set must be selected. A cam off-set can be either negative (-ve) or positive (+ve).

Cam length (dimension cl)

This impacts the reach of the cam to door frame and hence impacts positioning of cam body for installation. Cam length is measured from the centre of the cam fixing hole to the cam's leading edge. Most typically cams are 45 mm in length.

Use formula to calculate ch (required cam off-set), and refer to the cam selection chart.

$ch = h - lh$ where;

ch = the required cam off-set/height

h = grip length (distance between inside of latch face and front of cam).

lh = body length of cam latch/lock to be used (see example below)

Example of calculation of correct cam off-set

Example one

Cam body A1003.AW0010 has been selected for the application. If we refer to the data sheet for this part, suitable cams are parts A0203, A0210 or A0240 - "without projection".

Known application information: $h = 26$ $lh = 18$

Therefore; $ch = 26 - 18 = +8$

Cam off set of +8 is required

Using the data tables for cams A0203, A0210, and A0240 we can select the following cams without projection with an off set of +8; A0203.AW5408 (steel), A0210.AW0428 (stainless) or A0240.AW0108 (three point cam).

Example two

Cam body A1003.AW0010 has been selected for the application. If we refer to the data sheet for this part, suitable cams are parts A0203, A0210 or A0240 - "without projection".

Known application information: $h = 14$ $lh = 18$

Therefore; $ch = 14 - 18 = -4$

The required cam off set is negative, -4 as the application's door frame is effectively shorter/lower than the length of the cam body

Using the data tables for cams A0203, A0210 and A0240 we can select the following cam without projection with an off set of -4; A0203.AW6404 (steel).

Calculation of correct cam off-set

Cam Off-Set (dimension ch)

To ensure your cam fully and correctly engages with the frame of your door the correct cam off-set must be selected. A cam off-set can be either negative (-ve) or positive (+ve).

Cam Length (dimension cl)

Impacts reach of the cam to door frame and hence impacts positioning of cam body for installation. Cam length or reach is measured from the centre of the cam fixing hole to the cam's leading edge. Refer to individual cam body datasheets.

Cam off-set

Use the formula to calculate your correct cam off-set:

$$ch = h - lh$$

ch = the required cam off-set.

h = distance between inside of lock face and front of cam (also referred to as "grip length").

lh = length of cam body to be used (refer to individual cam body data sheets).

Wixroyd Cam Latches

technical specification and advice

Cam Latches and Locks

Physical and chemical characteristics of polyamide

Physical condition	solid (at 20°C)
Density	> 1,0 g/cm ³
Yield Point	220°C
Smell	No particular smell
Dissolvability in water	Undissolvable
Segregation temperature	> 350°C
Fire Point	>390°C
Auto ignition temperature	> 400°C

Zinc

Zinc Alloy is the most fundamental material for the Wixroyd product range. Housings, inserts, handles, spacers, keys, hinges etc, are all die cast products. The zinc used is a zinc alloy with the following contents (except zinc): Al 4,03% Cu 0,83% as well as minor contents of Mg, Fe, Pb, Cd, Sn and Ni.

RoHS Compliance

Our Cam Latches are RoHS Compliant.

Materials

Plastic - Polyamide

Many of our products are made of injection moulded plastic, normally polyamide. When needed, we add fibreglass to the material, in order to optimise qualities of the product. Examples of products made out of polyamide: handles, housings, rod guides etc.

Degrees of sealing protection

A product classified to an IP rating has either been tested in an independent laboratory, or due to the resemblance of its structure to a tested product, classified as IP.

Important note: We can only guarantee our products correspond to the indicated classification when assembled and used correctly.

**IP65
RATED**

IP 65: Dust Tight and Jetting Secure. Through the application of an o-ring and a flat gasket, this higher classification can be achieved.

**IP54
RATED**

IP 54: Dust and Splash Protected. This is the standard classification for our products. Equivalent to NEMA3.

IP ratings

Character	Value	Standard
Density	1,35 g/cm ³	DIN 53479
Hardness	65 Shore A	DIN 53505
Breaking Strain	5 N/mm ²	DIN 53504
Expansion	200%	DIN 53504
Heat & cold resistance	max. 70°C, min. -35°C	

Through the application of a flat gasket between the lock and the door, class IP 65 or NEMA 4 is achieved.

Character	Value	Standard
Density	1,240 g/cm ³	DIN 53479
Hardness	71 Shore A	DIN 53505
Breaking strain	14 N/mm ²	DIN 53504
Expansion	280%	DIN 53504
Recoil elasticity	32%	DIN 53512
Heat & cold resistance	max. 120°C, min. -40°C	

Pressure deformation test			
Time/temp.	Type of test	Standard	Result
22h/100°C	DVR	DIN 53517 A	9%
70h/100°C	DVR	DIN 53517 A	12%

The flat gasket is made out of a mixture of NBR (Nitrile Rubber) and SBR (Styrolbutadiene Rubber). This gives the gasket a satisfactory chemical resistance and a good constancy to oil.

Flat gaskets/ Sealing Washer

For all O-rings, an NBR material with the following technical characteristics is used.

O Rings

Flexi-system cut out

Our flexi-system is based on a standard installation cut out 22,2 Ø and 20,2 sq.

Option 1: Installation when fully assembled

When the cam latch grip (h) is 9mm or more this method is possible:-

1. With the cam body and cam fully assembled, attach the sealing washer to cam body.
2. Tilt the latch 45° and pass it, cam first, through the installation cut out in the panel.
3. When in place attach the fixing nut to the cam body to secure. Tighten to 10 Nm max.

Option 2: Installation unassembled

When the cam latch grip (h) is less than 9mm this method is suitable:-

1. Prior to commencing ensure that the cam body, cam, cam screw, fixing nut and sealing washer are completely unassembled.
2. Attach the sealing washer to the cam body and pass through installation cut out in panel.
3. Attach the fixing nut to the cam body to secure. Tighten to 10 Nm max.
4. Attach the cam to the cam body. Once you have ensured that the cam has the correct orientation toward the panel frame, secure the cam screw and tighten to 4 Nm.
