

Minature Shock Absorbers, Self M8 - M12, non-adjustable

Shock Absorbers

68001

SHOCK ABSORBERS

Material

Outer Tube: STKM11A, hardened and blackened.
Piston Rod: AISI 1045 hardened to HV940°, chrome plated.
Return Spring: DIN GWP.
Muffler Cap: urethane rubber.
Seal: nitrile rubber.

Technical Notes

Supplied with rubber muffler cap as standard, this is removable - see introductory technical notes for guidance.

Tips

Select High Impact Speed model for hard impact at start of stroke. For hard set down

at end of stroke choose a Medium or Low Impact Speed model.

Important Notes

For correct product selection refer to Product Selection Formulae and Calculation pages, and associated Capacity & Selection Charts.

Order No.	Stroke mm	Nm per cycle (Et) Nm max.	Per hour (ETc) Nm max.	Effective mass (Me) kg max.	Impact speed (v) m/s max.	Impact speed (v) m/s max.	Operating temperature °C	Thre ad	a	b	c	d	e	f	h	i	Weig ht g

Material

Outer Tube: STKM11A, hardened and blackened.

Piston Rod: AISI 1045 hardened to HV940°, chrome plated.

Return Spring: DIN GWP.

Muffer Cap: urethane rubber. Seal: nitrile

rubber.

Technical Notes

Supplied with rubber muffer cap as standard, this is removable - see introductory technical notes for guidance.

Important Notes

For correct product selection refer to Product Selection Formulae and Calculation pages, and associated Capacity & Selection Charts.

Shock Absorbers benefits and features

Why do we need shock absorbers?

Shock Absorbers are widely used in industry where the speed, direction or movement of objects must be changed or stopped. Without suitable methods of control the kinetic energy inherent in many moving objects, which occur in manufacturing, can result in increased machine wear and even machine damage.

Ideally any method of "shock absorption" should provide two key features:

- 1) Bring the moving object to rest quickly, smoothly and without rebounding forces
- 2) In-built reliability and safety

Shock Absorbers are able to quickly convert the kinetic energy of a moving object into heat and to dissipate this into the air, and provide a constant linear deceleration of an object throughout its entire impact stroke, to quickly, smoothly and quietly bring a moving object to rest with the lowest reaction force and in the shortest time. All of these features mean increased manufacturing productivity, extended machine life, and improved efficiency.

The cost of outdated buffering methods

Traditional buffering methods:

- Springs
- Dash Pots
- Air Buffers
- Rubber bumpers

Costs associated with outdated cushioning methods:

- Loss of production
- Increased machine wear and tear
- Increased maintenance cost
- Increased vibration and noise pollution
- Varying and inconsistent dampening forces, with non-linear or high peak forces at some point in their stroke.

Traditional buffering methods can only dissipate a small percentage of the kinetic energy of a moving object, the remainder is stored (rather than dissipated) as elastic energy which results in high resistance and rebounding forces toward the end of the impact stroke.

Benefits of using Wixroyd Shock Absorbers

Wixroyd Shock Absorbers are designed to stop a moving object smoothly and quietly from the beginning to the end of its impact stroke. Their design enables a constant resistance force or linear deceleration throughout the impact stroke, quickly converting the kinetic energy of the moving object into heat which is quickly dissipated into the air. A linear deceleration curve, as achieved by our shock absorbers, brings an object to rest in the shortest time while reducing damaging impact forces.

Energy Capacity: Shock absorbers can absorb more energy, without increasing deceleration or reaction forces.

Stopping Force: Shock absorbers provide smooth deceleration of parts, which means less machine wear and hence reduced maintenance.

Stopping time: Shock absorbers bring moving loads to rest more quickly, increasing productivity.

Advantages of using Wixroyd Shock Absorbers

- Consistent and reliable dampening force or linear deceleration, throughout entire impact stroke
- Smoother motion and deceleration of moving parts
- Increased productivity
- Extended machine life and improved efficiency
- Simplified application design and build costs
- Reduced maintenance costs
- Improved health and safety, through reduced vibration and noise pollution

Comparison of shock absorbers vs. other methods

Dashpots: produce large peak forces at beginning of impact stroke, abruptly slowing load - however braking force quickly declines.

Springs & Rubber Buffers: energy is stored rather than dissipated, resulting in rebounding of the load.

Air Buffers: initial braking force is low, but due to the compressibility of air it increases sharply toward later stages of stroke, resulting in inconsistent braking force.

Shock Absorbers: designed to stop a moving object smoothly and quietly from beginning to end of its impact stroke. Their design enables constant resistance force or linear deceleration throughout impact stroke, they quickly convert kinetic energy of a moving object into heat which is quickly dissipated into the air.

Wixroyd Shock Absorbers are available in two primary types

Self compensating shock absorber **68001**

Our Self-Compensating Shock Absorbers are effective for a stated range of Effective Mass (Me), and are self-compensating within this range - see selection charts. As long as the applications effective mass remains within the given range then no additional adjustment is required for changes in weight, speed or propelling force.

See models: **68001, 68002, 68003, 68004, 68008, 68012**

Self compensating shock absorber **68002**

Each Self-Compensating Shock Absorber is available in three standard max. Impact speed (v-m/s) variations:

- 1 - high impact speed
- 2 - medium impact speed
- 3 - low impact speed

For specific max. impact speed values please refer to the selections charts and the specific product tables.

For hard impact at the start of a stroke it is advisable to choose a high impact speed model, for hard set down at the end of a stroke it is advisable to choose a medium or low impact speed model, or to move up to the next higher bore size

Self-compensating

Adjustable shock absorber **68020**

Set collar to 0 at initial installation

After a few cycles adjust collar setting to suit application

Adjustable

Adjustable Shock Absorbers have an adjustment collar at their base (with a scale of 0-9), which enables adjustment of the Shock Absorber's optimum deceleration to suit the application.

After initial installation, the Shock Absorber should be cycled a number of times to settle, and then the adjustable collar turned to the desired position for the application.

Inside a Wixroyd Shock Absorber

Shock absorber design

The design of Wixroyd Shock Absorbers is beautifully simple and beautifully effective. Made from high quality materials and components, they provide the highest performance and reliability.

Wixroyd Shock Absorbers

operating principles and operating sequence of shock absorbers

At rest

- 1) Shock Absorber at rest, piston rod (1), fully extended through force exerted on it by return spring (2).

Initial impact

- 2) Moving load impacts piston (1), which moves into shock absorber body increasing pressure in chamber.
- 3) Piston rod check valve closes (2). Hydraulic oil behind the piston head is initially able to escape/vent into the accumulator (3).

Continued impact and linear deceleration

- 4) As load on piston rod (1) increases, the rod continues to move back into the inner tube, as it does so the number of available metering orifices (2) through which the hydraulic oil is able to escape reduces - hence the velocity of the moving load continues to decelerate.
- 5) The number and position of the orifices are such that the pressure in the inner tube remains constant throughout the entire impact stroke - providing constant linear deceleration. (Number of metering orifices decreases proportionally through length of piston rod.)

Load brought to rest

- 6) The moving load is brought to a smooth and quiet stop.
- 7) When the load is removed the return spring (2) pushes the piston (1), back to its original resting position, ready for the next cycle.

Optional extras

Stop collars

We advise the use of external mechanical stops with all of our Shock Absorbers, typically within 1 to 0.5 mm from the end of the stroke. Alternatively, we have a range of stop collars available which can be mounted directly to the shock absorber body (see our part 68030). Stop Collars are available for our M8 to M36 threaded models, they can be used both to adjust stroke and also to fix the end position of the load.

Flange mounting adaptors

Basic mounting of shock absorbers is through the use of its threaded body, and lock nuts supplied. Alternatively Shock Absorbers can be flange mounted, please see our available flange mounting adaptors part 68032 for our M36 and M42 threaded models.

Muffler caps

Shock Absorbers are supplied with muffler caps as standard. Muffler caps can be removed from the Shock Absorber Piston by heating them with a lighter and pulling away using a pair of pliers.

Application examples

Pick and place robots

Pick and place machines

How to select your Wixroyd Shock Absorber

- 1) Direction of movement - horizontal, free fall or rotary
- 2) Total weight of impacting object
- 3) Propelling force - if present

- 4) Impact velocity of load
- 5) Number of cycles/impact per hour
- 6) Number of shock absorbers in application (only if parallel)

Firstly consider the following:

- 1) Mass to be decelerated (weight) m (kg)
- 2) Impact velocity at shock absorber ..v (m/s)
- 3) Propelling or driving force..... F (N)

- 4) Number of impact cycles per hour... C (/hr)
- 5) Desired shock absorber stroke S (m)

Secondly, ascertain the following from your application

ET (Nm) Maximum energy absorbed per cycle
ETC (Nm/hr) Maximum energy absorbed per hour
Me (Kg) Effective mass

Thirdly, derive value for the following within your application

Formulae on the following pages will allow you to derive these values for the most appropriate set-up of your application.

Using the values derived from you calculations, refer to our selection charts and identify the most suitable Wixroyd Shock Absorber for your application.

Finally, refer to our selection charts

Mounting and installation information

1. Please install a 1 to 0.5 mm mechanical stop or stop collar before the end of the impact stroke and do not drive shock absorbers into their final position under full load. See the range of Stop Collars part 68030, which can be easily mounted on to shock absorbers to protect shock absorber pistons from bottoming out and can also be used to adjust the final stroke.
2. Reusing is prohibited after dismantling. Do not paint the piston rod or threaded body. This both inhibits movement of the piston and can interfere with effective heat dissipation.
3. Install shock absorbers as close to the moving object's centre as possible.
4. If installing shock absorbers in sheet metal, please ensure sheet metal is robust enough.
5. When installing two or more shock absorbers in parallel, please ensure that they have the same stroke.

Product selection calculation

- 1) Kinetic energy: $E_k = mv^2/2$
- 2) Drive energy: $E_d = F \cdot S$
- 3) Free fall velocity: $v = \sqrt{2g \cdot h}$
- 4) Pneumatic or hydraulic cylinder driving forces: $F = 0.00785 Pd^2$
- 5) Maximum shock force (approximate): $F_m = 1.2 E_T/S$
- 6) Propelling force generated by electric motors: $F = 3000 kW/v$
- 7) Total energy absorbed per hour: $E_{TC} = E_T \cdot C$

Some useful calculation formulae

μ	-	coefficient of friction	E_{TC}	(Nm)	total energy per hour	M_e	(kg)	effective mass
α	(rad)	angle of incline	F	(N)	propelling force	P	(Bar)	operation pressure
θ	(rad)	side load of angle	F_m	(N)	maximum shock force	R	(m)	radius
ω	(rad/s)	angular velocity	g	(m/s ²)	acceleration due to gravity (9.81m/s ²)	R_s	(m)	shock absorber mounting distance from rotation center
A	(m)	width						
B	(m)	thickness	h	(m)	height	S	(m)	stroke
C	(/hr)	impact cycles per hour	I	(Nm/s ²)	moment of inertia	T	(Nm)	driving torque
d	(mm)	cylinder bore diameter	HM	-	arresting torque factor for motors (normally 2.5)	t	(s)	decelartion time
E_d	(Nm)	drive energy per cycle				v	(m/s)	velocity of impact mass
E_k	(Nm)	kinetic energy per cycle	kW	(kW)	electric motor power	v_s	(m/s)	impact velocity at shock absorber
E_T	(Nm)	total energy per cycle	m	(kg)	mass to be decelerated			

Key to formulae symbols used

1) Horizontal moving mass - without propelling force

m = 300kg
v = 1,0m/s
S = 0,04m
C = 300/hr

$$E_k = \frac{mv^2}{2} = \frac{300 \cdot 1,0^2}{2} = 150\text{Nm}$$

$$E_T = E_k = 150\text{Nm}$$

$$E_{TC} = E_T \cdot C = 150 \cdot 300 = 45000\text{Nm/hr}$$

$$M_e = \frac{2E_T}{v^2} = \frac{2 \cdot 150}{1,0^2} = 300\text{kg}$$

Selection from capacity chart: 68024.W0362 is suitable

2) Horizontal moving mass - with propelling force

m = 300kg
v = 1,2m/s
S = 0,05m
P = 40N/cm²
d = 100mm
C = 300/hr

$$E_k = \frac{mv^2}{2} = \frac{300 \cdot 1,2^2}{2} = 216\text{Nm}$$

$$E_D = F \cdot S = 0,00785Pd^2 \cdot S = 0,00785 \cdot 40 \cdot 100^2 \cdot 0,05 = 157\text{Nm}$$

$$E_T = E_k + E_D = 216 + 157 = 373\text{Nm}$$

$$E_{TC} = E_T \cdot C = 373 \cdot 300 = 111900\text{Nm/hr}$$

$$M_e = \frac{2E_T}{v^2} = \frac{2 \cdot 373}{1,2^2} = 518\text{kg}$$

Selection from capacity chart: 68024.W0422 is suitable

3) Horizontal moving mass - motor driven

m = 400kg
v = 1,0m/s
kW = 1,5kW
HM = 2,5
S = 0,075m
C = 60/hr

$$E_k = \frac{mv^2}{2} = \frac{400 \cdot 1,0^2}{2} = 200\text{Nm}$$

$$E_D = F \cdot S = \frac{kW \cdot HM}{v} \cdot S = \frac{1500 \cdot 2,5}{1,0} \cdot 0,075 = 281\text{Nm}$$

$$E_T = E_k + E_D = 200 + 281 = 481\text{Nm}$$

$$E_{TC} = E_T \cdot C = 481 \cdot 60 = 25860\text{Nm/hr}$$

$$M_e = \frac{2E_T}{v^2} = \frac{2 \cdot 481}{1,0^2} = 962\text{kg}$$

Selection from capacity chart: 68024.W0423 is suitable

4) Horizontal moving mass - driven rollers

m = 150kg
v = 0,5m/s
μ = 0,25
S = 0,02m
C = 120/hr

$$E_k = \frac{mv^2}{2} = \frac{150 \cdot 0,5^2}{2} = 18,75\text{Nm}$$

$$E_D = F \cdot S = mg\mu \cdot S = 150 \cdot 9,81 \cdot 0,25 \cdot 0,02 = 7,35\text{Nm}$$

$$E_T = E_k + E_D = 18,75 + 7,35 = 26,1\text{Nm}$$

$$E_{TC} = E_T \cdot C = 26,1 \cdot 120 = 3132\text{Nm/hr}$$

$$M_e = \frac{2E_T}{v^2} = \frac{2 \cdot 26,1}{0,5^2} = 208,8\text{kg}$$

Selection from capacity chart: 68002.W0203 is suitable

$$\begin{aligned}
 v &= \sqrt{2g \cdot h} = \sqrt{2 \cdot 9,81 \cdot 0,3} = 2,43 \text{ m/s} \\
 E_k &= \frac{mv^2}{2} = \frac{150 \cdot 2,43^2}{2} = 443 \text{ Nm} \\
 E_D &= F \cdot S = m \cdot g \cdot S \cdot \sin \alpha = 150 \cdot 9,81 \cdot 0,075 \cdot \sin 30^\circ = 55,2 \text{ Nm} \\
 E_T &= E_k + E_D = 443 + 55,2 = 498,2 \text{ Nm} \\
 E_{TC} &= E_T \cdot C = 498,2 \cdot 200 = 99640 \text{ Nm/hr} \\
 M_e &= \frac{2E_T}{v^2} = \frac{2 \cdot 498,2}{2,43^2} = 168,7 \text{ kg}
 \end{aligned}$$

8) Free moving mass - on inclined plane

$m = 150 \text{ kg}$
 $h = 0,3 \text{ m}$
 $\alpha = 30^\circ$
 $S = 0,075 \text{ m}$
 $C = 200 \text{ /hr}$

Selection from capacity chart: 68024.W0423 is suitable

9) Horizontal rotating door

$m = 20\text{kg}$
 $\omega = 2,0\text{rad/s}$
 $T = 20\text{Nm}$
 $R_s = 0,8\text{m}$
 $A = 1,0\text{m}$
 $B = 0,05\text{m}$
 $S = 0,016\text{m}$
 $C = 100/\text{hr}$

$$\begin{aligned}
 I &= \frac{m(4A^2 + B^2)}{12} = \frac{20(4 \cdot 1,0^2 + 0,05^2)}{12} = 6,67\text{kg} \cdot \text{m}^2 \\
 E_k &= \frac{I\omega^2}{2} = \frac{6,67 \cdot 2,0^2}{2} = 13,34\text{Nm} \\
 \theta &= \frac{S}{R_s} = \frac{0,04}{0,8} = 0,05\text{rad} \\
 E_D &= T \cdot \theta = 20 \cdot 0,5 = 1,0\text{Nm} \\
 E_T &= E_k + E_D = 13,34 + 1,0 = 14,34\text{Nm} \\
 E_{TC} &= E_T \cdot C = 14,34 \cdot 100 = 1434\text{Nm/hr} \\
 v &= \omega \cdot R_s = 2,0 \cdot 0,8 = 1,6\text{m/s} \\
 M_e &= \frac{2E_T}{v^2} = \frac{2 \cdot 14,34}{1,6^2} = 11,2\text{kg}
 \end{aligned}$$

Selection from capacity chart: 68002.W0203 is suitable

10) Horizontal rotating mass - with torque

$m = 40\text{kg}$
 $A = 0,5\text{m}$
 $B = 0,05\text{m}$
 $\omega = 2,0\text{rad/s}$
 $T = 10\text{Nm}$
 $R_s = 0,4\text{m}$
 $S = 0,05\text{m}$
 $C = 50/\text{hr}$

$$\begin{aligned}
 I &= \frac{m(4A^2 + B^2)}{12} = \frac{40(4 \cdot 0,5^2 + 0,05^2)}{12} = 3,36\text{kg} \cdot \text{m}^2 \\
 E_k &= \frac{I\omega^2}{2} = \frac{3,36 \cdot 2,0^2}{2} = 6,8\text{Nm} \\
 \theta &= \frac{S}{R_s} = \frac{0,05}{0,4} = 0,125\text{rad} \\
 E_D &= T \cdot \theta = 10 \cdot 0,125 = 1,25\text{Nm} \\
 E_T &= E_k + E_D = 6,8 + 1,25 = 8,05\text{Nm} \\
 E_{TC} &= E_T \cdot C = 8,05 \cdot 50 = 402,5\text{Nm/hr} \\
 v &= \omega \cdot R_s = 2,0 \cdot 0,4 = 0,8\text{m/s} \\
 M_e &= \frac{2E_T}{v^2} = \frac{2 \cdot 8,05}{0,8^2} = 25,15\text{kg}
 \end{aligned}$$

Selection from capacity chart: 68003.W0361 is suitable

11) Rotary index table - with propelling force

$m = 200\text{kg}$
 $\omega = 1,0\text{rad/s}$
 $T = 100\text{Nm}$
 $R = 0,5\text{m}$
 $R_s = 0,4\text{m}$
 $S = 0,04\text{m}$
 $C = 100/\text{hr}$

$$\begin{aligned}
 I &= \frac{mR^2}{2} = \frac{200 \cdot 0,5^2}{2} = 25\text{kg} \cdot \text{m}^2 \\
 E_k &= \frac{I\omega^2}{2} = \frac{25 \cdot 1,0^2}{2} = 12,5\text{Nm} \\
 \theta &= \frac{S}{R_s} = \frac{0,04}{0,4} = 0,1\text{rad} \\
 E_D &= T \cdot \theta = 100 \cdot 0,1 = 10\text{Nm} \\
 E_T &= E_k + E_D = 12,5 + 10 = 22,5\text{Nm} \\
 E_{TC} &= E_T \cdot C = 22,5 \cdot 50 = 1125\text{Nm/hr} \\
 v &= \omega \cdot R_s = 1,0 \cdot 0,4 = 0,4\text{m/s} \\
 M_e &= \frac{2E_T}{v^2} = \frac{2 \cdot 22,5}{0,4^2} = 281\text{kg}
 \end{aligned}$$
